Education

Concordia University – MEng in Software Engineering (GPA: 3.66/4.3) Sep. 2024 - Present
Asia Pacific University of Technology & Innovation – BSc (Hons) in Computer Science Oct. 2020 - Mar. 2024

Experience

Software Engineer (Volunteer), One Community Global – Remote Jun. 2026 – Present

- Worked on the open-source Highest Good Network application using React, Express.js, Node.js & MongoDB.
- Developed a job application analytics feature to compare completion times and volume of applications per role.

Freelance Web Developer, Self-Employed – Remote Mar. 2022 – May 2023

- Delivered high-performing, responsive websites for Malaysian enterprise clients using Next.js and Gatsby.
- Designed user-centered Figma prototypes based on client requirements.
- Improved website content with copywriters, ensuring 100% alignment between visual design and messaging.

Full Stack Developer Intern, Tinkerve LLP – Kuala Lumpur, Malaysia Aug. 2022 – Nov. 2022

- Developed a chatbot-based automation system for Malaysian businesses in retail, e-commerce, manufacturing, etc. using React/TypeScript, Express.js, Node.js, MongoDB, Redux, and Sass.
- Implemented a multi-channel feature, allowing users to seamlessly integrate chatbots across both WhatsApp and Telegram, designing REST API for tenant platforms, and building functional React components from Figma.
- Implemented a Glide Data Grid to handle large-scale data, including lazy loading, context menu, search, etc.

Projects

Cordia | Next.js/TypeScript, Supabase, shadcn/ui, Tailwind CSS cordia-app.vercel.app

- Built a classroom availability finder using Concordia's Open Data with campus, building, day, and time filters.
- Automated data synchronization by configuring a weekly job scheduler using Cron Job that automatically cleans, processes, and seeds Concordia's course schedules into Supabase.

Foodly | React/TypeScript, Express.js, Node.js, MongoDB, Redux, Socket.IO foodly-app.onrender.com

- Developed a full-stack food donation platform, enabling users to track and manage donations across Malaysia.
- Designed the database schema (MongoDB), REST APIs (Node.js and Express.js), and high fidelity prototypes (Figma), then translating them into a fully functional application.
- Implemented a JSON Web Token authentication with role-based authorization to prevent unauthorized access.
- Implemented a built-in chat and real-time notification system using Socket.IO.
- Integrated Mapbox to visualize community locations and measure the distance between donor and recipient.

URL Shortener | React, Express.js, Node.js, MongoDB, Tailwind CSS url-shortener-pi-three.vercel.app

- Developed a full-stack URL shortener application, allowing users to truncate long web addresses.
- Built a backend service using Node.js and Express.js for URL generation and redirection, as well as utilizing MongoDB for data storage and retrieval of shortened URLs.
- Designed and implemented a responsive User Interface using React and Tailwind CSS.

Skills

Languages: TypeScript, JavaScript, Java, HTML, CSS, Sass

Frontend: React, Next.js, Gatsby, Tailwind CSS

Backend: Node.js, Express.js, Spring Boot, MongoDB, PostgreSQL, MySQL, Firebase

Tools: Git, GitHub, Docker, AWS, Figma
